SPECIFICATIONS

Available in either 65 mm or 100mm set ups the Smartpit fits directly to the pipe work.

With no on site drilling of holes at the waterline or below, installation has been made easier, and safer.

Differing inlet heights are accommodated by the use of pit collars, readily available in 250 mm sections.

The Smartpit comes fully fitted and ready to install, two power points need to be made available, and it's a simple plug in and start.

The Smartpit's 400kg rated lid is lockable and secure, concealing your garden saving Greywater in an unobtrusive and safe system.

SIMPLE AND SAFE GREY WATER PLUMBING

Inherent in the design of the Smartpit is the desire to continue watering with grey water long after you have forgot to clean the filters.

An annual service with the aid of an aqua vac will easily and simply get your system clean again.
